## **Trunica releases all new Notepad application**

Tampa, Florida - May 4<sup>th</sup>, 2016 - Today Trunica released their all new app, NoteTag. Notetag is a notepad application that is available on all three mobile platforms (Android, iOS, and Windows) through the use of Cordova. The application simplifies the user's note taking experience by making it quick and easy to take and save notes. In addition to this, the user is also provided with the unique ability to attach their current GPS location to the note and upload it to a cloud server. Notes saved to the cloud server are then retrievable by anyone within an adjustable radius. This allows users to share all kinds of information with anyone that is close to them.

“Whether it's simply saving a personal note to your phone or uploading a short review of your local restaurant, NoteTag allows you to do it all” - Yoshitaka Meguro (One of our test users).
